

CLAIM AMENDMENTS

RECEIVED
JUL 03 2003
TC 1700

1. (Currently Amended) A sheet of print media, the sheet comprising:

5 ~~top, bottom, left, and right~~ facial portions and ~~edges~~;
edge portions;

A
10 a single ~~respective~~ fluid-based marking, the single fluid-based marking
being positioned on ~~at least one~~ a facial portion of the facial portions and on an
edge portion of the edge portions, the edge portion covering an area that is
adjacently positioned and substantially perpendicular to an area of the facial
portion; and,

15 wherein the single fluid-based marking ~~comprising~~ comprises data
~~detectable by~~ for configuring an imaging device from the ~~at least one~~ facial
portion ~~and/or from the edge portion to configure operations to form images on~~
the sheet.

2. (Currently Amended) A sheet as recited in claim 1:

20 wherein for each facial portion of the facial portions, a single respective
fluid-based marking is positioned on ~~each the~~ facial portion and on an adjacent
and substantially perpendicular edge portion of the edge portions; and

wherein ~~any respective one individual ones~~ of the fluid-based markings
~~comprising~~ comprise data detectable by an for configuring operations of the
imaging device ~~from a corresponding edge or facial portion to configure~~
operations to form images on the sheet.

25

3. (Currently Amended) A sheet as recited in claim 1, wherein the
single respective fluid-based marking was imprinted on ~~an~~ the edge portion of

*Al
Cast*
~~the sheet~~ and not imprinted on a ~~corresponding~~ the facial portion of ~~the sheet~~,
the fluid-based marking having bled onto the ~~corresponding~~ facial portion.

4. (Currently Amended) A sheet as recited in claim 1, wherein the
5 single ~~respective~~ fluid-based marking is ink.

5. (Original) A stack of print media comprising a plurality of sheets,
each sheet being a sheet as recited in claim 1.

28. (Withdrawn)
5 29. (Withdrawn)
30. (Withdrawn)

31. (New) A sheet of print media as recited in claim 1, wherein the data comprises in the single fluid-based marking is for configuring the image
10 device to form images on the sheet.

32. (New) A sheet of print media comprising:
a plurality of facial portions;
a plurality of edge portions, each facial portion being adjacent and
15 substantially perpendicular to a respective one of the edge portions; and
a fluid-based marking that has been imprinted on the sheet in one or
more imaging actions to position the fluid-based marking being on both a
particular face portion of the facial portions and on a particular edge portion of
the edge portions, the particular face portion and the particular edge portion
20 being adjacent and substantially perpendicular with respect to one another, the
fluid-based marking comprising media parameters corresponding to the sheet.

33. (New) A sheet of print media as recited in claim 32, wherein the fluid-based marking is a barcode.

25

34. (New) A sheet of print media as recited in claim 32, wherein the sheet does not have sufficient capillary action properties to carry the fluid-based marking onto individual ones of the facial portions from respective ones of the edge portions.

5

35. (New) A sheet of print media as recited in claim 32, wherein the fluid-based marking was generated at least in part as a function of properties and positioning of a mask, the mask being substantially impermeable to any wicking action in response to contact with fluid used to generate the fluid-based marking, the mask having been placed over the sheet such that the particular one facial portion was not exposed from under the mask.

10

36. (New) A sheet of print media as recited in claim 32, wherein the fluid-based marking was generated at least in part as a function of properties and positioning of a mask, the mask being substantially impermeable to any wicking action in response to contact with fluid used to generate the fluid-based marking, the mask having been offset at an angle of skew from the particular one edge portion, the angle of skew corresponding to a size of the fluid-based marking on the particular one facial portion.

15

20

37. (New) A sheet of print media as recited in claim 32, wherein the fluid-based marking was generated by spraying, stamping, or printing fluid onto the particular edge and/or facial portions,.

25

38. (New) A sheet of print media as recited in claim 32, wherein the sheet is one of a plurality of sheets of print media in a stack of print media.

39. (New) A sheet of print media as recited in claim 32, wherein the sheet is an individual one sheet of a plurality of sheets in a stack of print media, each of the sheets being skewed at an angle with respect to each other sheet of the sheets such that each sheet exposes a respective facial-portion and a
5 respective edge portion that is adjacent and substantially perpendicular to the respective facial portion, the sheets being positioned such that when the fluid-based marking was applied to the sheet that a respective mark was applied onto each of sheets, each respective mark being substantially analogous in content and positioning to the fluid-based marking on the individual one sheet.

10

40. (New) A sheet of print media as recited in claim 39, wherein a size of the angle determines an extent that a respective mark will cover a corresponding facial portion.
